

Now available from Wick Hill - Sipera's award-winning UC security solutions integrated with McAfee ePolicy Orchestrator Security Management Platform

Enterprise Security Managers Gain Unprecedented Control Over Voice, Video, Collaboration, SIP Trunks, Cloud-based Communications

Woking, Surrey: 22nd June, 2011 - VAD Wick Hill announces the availability of Sipera's award-winning UC-Sec enterprise communications security solution, integrated with and designated as McAfee Compatible with the McAfee® ePolicy Orchestrator® (McAfee ePO™) security management platform.

The integration gives IT security managers unprecedented visibility of and control over the security of realtime business communications using converged IP networks. Now security managers can block threats and enforce policies on voice-over-IP, IP videoconferencing, SIP trunks, collaboration tools, Cloud-based communications and other real-time applications.

Sipera's products are network devices that provide comprehensive security and application-layer control for real-time UC applications and SIP trunks. As a complement to the existing security architecture, the UC-Sec provides application-layer firewalling, intrusion prevention, threat mitigation, access control and policy enforcement in real-time for delay sensitive applications.

Sipera's solutions enable enterprises to migrate mission-critical business communications to converged IP networks, SIP trunks, and Cloud-based service applications without increasing security risk or violating compliance rules.

The McAfee ePO platform lets enterprises and governments centrally manage security and compliance products from multiple vendors, offering cost savings and return on investment. With more than 40,000 organizations managing over 60 million PCs and servers, this unique platform is helping McAfee Security Innovation Alliance™ partners to extend their reach and create complementary functionality.

The Sipera security systems were compatibility tested within the McAfee Security Innovation Alliance program, which helps accelerate the development of interoperable security products and simplifies the integration of these products within complex customer environments.

"Real-time business communications applications such as voice and video conferencing have migrated to converged IP network. Now the security functions of that network must adapt to these new applications," said Adam Boone, Vice President of Marketing and Product Management for Sipera Systems. "Together, the McAfee ePO security management platform and Sipera's groundbreaking VoIP and UC security solutions enable security managers to see and control the security posture of these real-time applications for the first time."

"We're pleased that the Sipera Systems UC-Sec enterprise communications security solution has been deemed a McAfee Compatible solution with the McAfee ePO platform," said Ed Barry, vice president of the Security Innovation Alliance, McAfee. "Our joint solution ensures that real-time applications such as VoIP, video conferencing, and collaboration tools can be monitored and tracked via McAfee ePO dashboards, thus providing administrators greater control and nimbleness in a cost-effective manner."

About Wick Hill

Established in 1976, value added distributor Wick Hill specialises in secure IP infrastructure solutions and convergence. The company sources and delivers best-of-breed, easy-to-use solutions through its channel partners, with a portfolio that covers security, performance, access, networking, convergence and hosted solutions.

Wick Hill is part of the Wick Hill Group, based in Woking, Surrey with sister offices in Hamburg. Wick Hill is particularly focused on providing a wide range of value added support for its channel partners. This

includes a strong lead generation and conversion programme, technical and consultancy support for reseller partners in every stage of the sales process, and extensive training facilities.

About Siper Systems

Sipera Systems is the worldwide leader in solutions for the safe, simple and controlled deployment of IP-based business communications. Sipera's groundbreaking Unified Communications (UC) security products are the choice of enterprises and service providers around the globe for deploying secure VoIP, SIP trunks, video conferencing, cloud-based communications, instant messaging, and collaboration tools.

Independent research by industry analysts shows that Sipera's solutions can accelerate VoIP and UC project deployment by up to one third. Backed by the industry-leading research of the VIPER Lab, Sipera's solutions provide the industry's best protection against toll fraud, identity theft, denial of service, unauthorized intrusion, eavesdropping and other common business communications threats. Pre-integrated with all market-leading UC vendor solutions, Sipera's offerings include the world's first UC security device to be Common Criteria certified, meeting the stringent international standard for IT security.
