

WICK HILL AT INFOSECURITY EUROPE 2011

Stand no D20

Woking, Surrey: 15th March, 2011 - Wick Hill is showing a wide range of new and established security solutions from vendors such as WatchGuard, Check Point, LogLogic, Panasonic and Sipera.

These include WatchGuard's latest XTM software, which features powerful new ways to control security; Control Phreak, which prevents toll fraud, in conjunction with Panasonic's voice switch systems; LogLogic 5, with support for the recently launched VMware VCloud™ Director, which lets cloud computing users operate a secure, efficient IT infrastructure within a compliance framework; and Abra from Check Point, which provides a radical alternative to securing remote users, while cutting costs and simplifying administration.

Wick Hill has recently expanded into the convergence arena and will be one of the few companies showing security solutions for converged networks. These include secure, converged voice/data solutions from Samsung and Panasonic; a range of security systems specifically aimed at converged networks from Sipera, including smartphone security and SIP trunking security; plus Kaspersky Lab's smartphone security solution Mobile Security 9.

Ian Kilpatrick, chairman Wick Hill Group, commented: "This show has traditionally been excellent for us and with new solutions on show, to deal with the continuing changes in the security landscape, we expect this to be a great show."
